Square Helix

A = Width
B = Length
C = Pitch
D = Rotations (or turns)

$L=(A+B) \times 2 \times D$

SHAPE CODE 78

USA Bar Size Conversion		
#	In.	mm
2	0.250	6.4
3	0.375	9.5
4	0.500	12.7
5	0.625	15.9
6	0.750	19.1
7	0.875	22.2
8	1.000	25.4
9	1.125	28.6
10	1.250	31.8

The maximum possible dimensions depend on the shape of the Bend.

Example: For a square, the maximum A & B Dimensions are 1660mm

For a rectangular shape, you may be able to get the A dimension close to 2400mm if the B dimension is minimum.

To calculate whether a square $A \times B = 1000 \times 2000$ mm can be manufactured:

$$D = \sqrt{A^2 + B^2} < 2,400\text{mm}$$

$$D = \sqrt{1000^2 + 2000^2} = 2,236\text{mm} < 2,400\text{mm} = \text{OK}$$

The minimum dimensions depend on the bar diameter, which is what sets the bend radius, and consequently the diameter of the corner former. The minimum B dimension would be when the corner formers touch each other.

Shapes - Advantages

- Flexibility
- Lighter than Steel
- Giant Slinky's

Shapes - Flexibility

Codes & Guides

ACI 440.1R-15

Guide for the Design and Construction of Structural Concrete Reinforced with Fiber-Reinforced Polymer (FRP) Bars

Reported by ACI Committee 440

S806-12
(reaffirmed 2017)

Design and construction of building structures with fibre-reinforced polymers

Industry Standards

This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

Designation: D7957/D7957M - 17

Standard Specification for Solid Round Glass Fiber Reinforced Polymer Bars for Concrete Reinforcement¹

This standard is covered under the fixed designation D7957/D7957M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last approval. A superscript symbol (n) indicates an editorial change since the last revision or approval.

1. Scope

1.1 This specification covers glass fiber reinforced polymer (GFRP) bars, provided in cut lengths and bent shapes and having an external surface enhancement for concrete reinforcement. Bars covered by this specification shall meet the requirements for geometric, material, mechanical, and physical properties described herein.

1.2 Bars produced according to this standard are qualified using the test methods and must meet the requirements given by Table 1. Quality control and certification of production lots of bars are completed using the test methods and must meet the requirements given in Table 2.

1.3 The text of this specification references notes and footnotes which provide explanatory material. These notes and footnotes (excluding those in tables) shall not be considered as requirements of the specification.

1.4 The following FRP materials are not covered by this specification:

1.4.1 Bars made of more than one load-bearing fiber type (that is, hybrid FRP).

1.4.2 Bars having no external surface enhancement (that is, plain or smooth bars, or dowels).

1.4.3 Bars with geometries other than solid, round cross sections.

1.4.4 Pre-manufactured grids and gratings made with FRP materials.

1.5 This specification is applicable for either SI (as Specification D7957M) or inch-pound units (as Specification D7957).

1.6 The values stated in either inch-pound units or SI units are to be regarded as standard. Within the text, the inch-pound units are shown in brackets. The values stated in each system are not exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in nonconformance with the specification.

1.7 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health and environmental practices and determine the applicability of regulatory limitations prior to use.

1.8 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

Specification for fibre-reinforced polymers

Testing

Testing GFRP is a specialist activity

Many test labs don't have appropriate experience

Get Recommendations of suitable labs

Tensile Test Method

- ASTM D7205/7205M – Standard Test Method for Tensile Properties of Fiber Reinforced Polymer Matrix Composite Bars

Typical Sample

Tensile Test Specimens

8.2.1 Overall Specimen Length and Gage Length—The total length of the specimen shall be the free length plus two times the anchor length, L_a . The free length between the anchors, L , shall be not less than 380 mm [15 in.] nor less than 40 times the effective bar diameter.

FRP bar type	Diameter of the FRP bar, d	Outside diameter of the steel tube	Minimal length of the steel tube, L_a
GFRP	6.4 mm [0.25 in.]	35 mm [1.38 in.]	300 mm [12 in.]
GFRP	9.5 mm [0.38 in.]	35 mm [1.38 in.]	300 mm [12 in.]
GFRP	13 mm [0.50 in.]	42 mm [1.63 in.]	380 mm [15 in.]
GFRP	16 mm [0.63 in.]	42 mm [1.63 in.]	380 mm [15 in.]
GFRP	19 mm [0.75 in.]	48 mm [1.88 in.]	460 mm [18 in.]
GFRP	22 mm [0.88 in.]	48 mm [1.88 in.]	460 mm [18 in.]
GFRP	25 mm [1.00 in.]	48 mm [1.88 in.]	460 mm [18 in.]
GFRP	29 mm [1.13 in.]	48 mm [1.88 in.]	460 mm [18 in.]
GFRP	32 mm [1.25 in.]	75 mm [2.95 in.]	800 mm [32 in.]

Specimen Length of 19mm (3/4") sample

$$= 40 \times 19\text{mm} + 2 \times 460\text{mm} = 1680\text{mm} (66")$$

Conclusion

- GFRP is a Genuine Alternative to Steel as a reinforcement for environments where steel is not suitable
- ✓ Cost Effective
- ✓ Proven History
- ✓ Codes & Guides
- ✓ Ideal for Challenging Environments

Don't Forget – GFRP Rebar is Not the same as Steel

▶ Engage with Manufacturer Early

- ▶ Learn about Lead Times
- ▶ Learn about the Shape Limitations
- ▶ Ensure accurate BOQ's

▶ Find a lab with Experience

- ▶ Get recommendations
- ▶ Consider Universities
