The Challenge: System Optimization

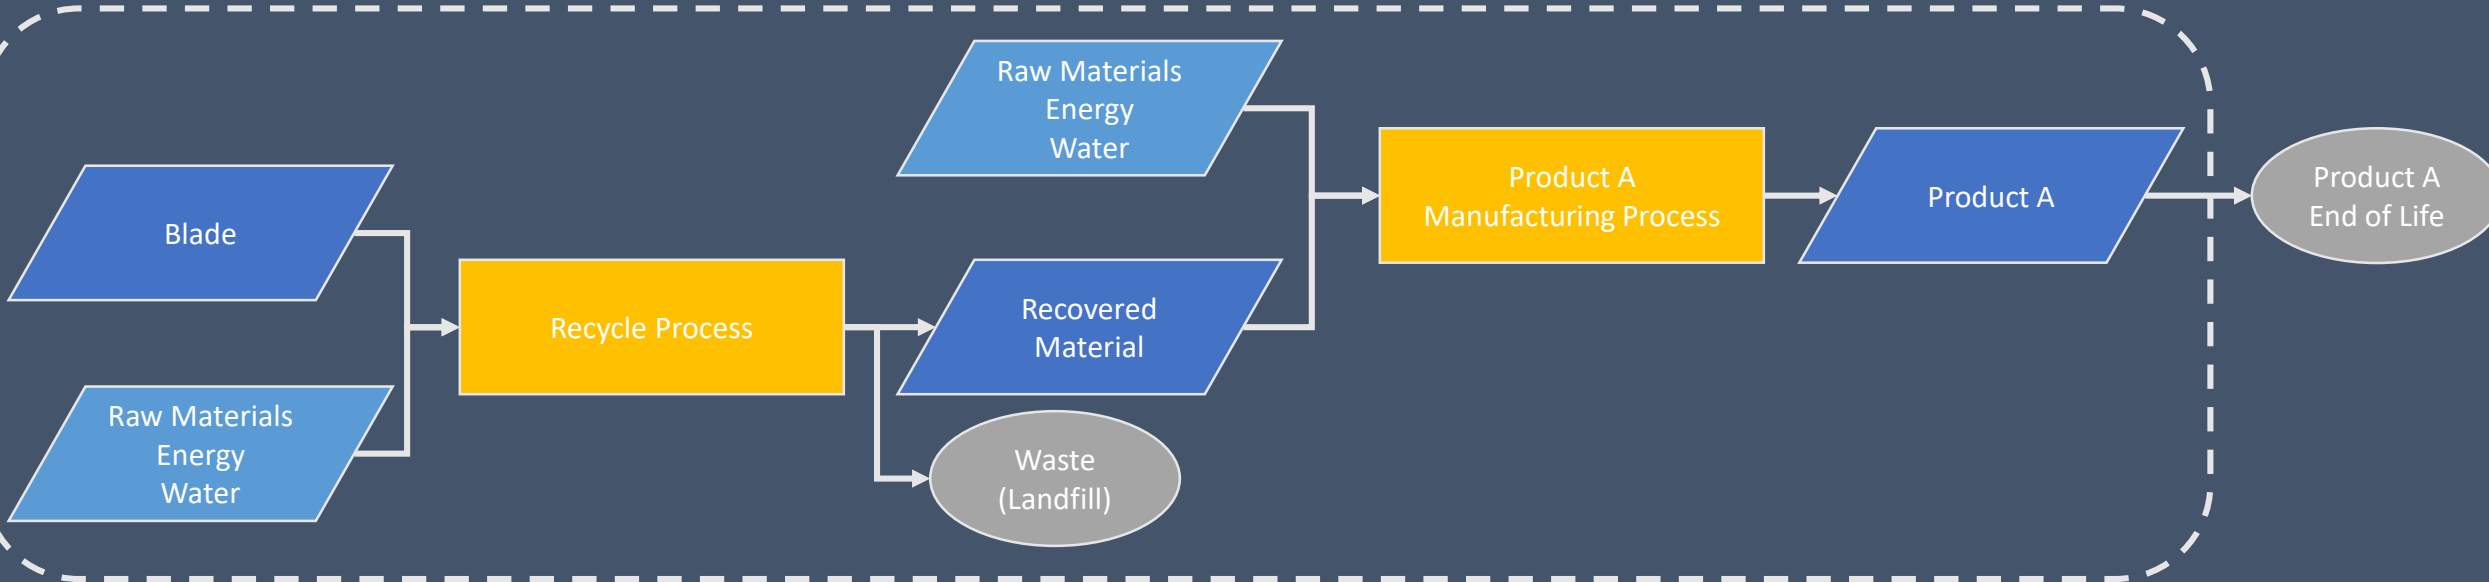

Circularity Considerations: Full Boundaries

Current Process

Recycling Process

Circularity Considerations: Impacts*

CARBON FOOTPRINT

Release of CO₂ and other greenhouse gasses that contribute to global climate change

Unit: Kg CO₂-eq

WATER FOOTPRINT

Freshwater withdrawal (water that is withdrawn from natural reservoirs)

Unit: m³ of water

HUMAN HEALTH

Effects on human health including respiratory effects, cancer and non cancer outcomes

Unit: DALY
(Disability-adjusted life years)

ECOSYSTEM QUALITY

A decrease in biodiversity (density of wildlife species) through destruction of habitat, pollution and other causes

Unit: PDF.m².y
(potentially disappearing fractions)

RESOURCES

Resources demand for specific process or product, mainly due to non-renewable energy consumption and mineral extraction

Unit: MJ

Composite Recycling – Technical Considerations

- **Composition of incoming material**
- **Separation of incoming material**
- Cutting, grinding, shredding methods
- **Properties of recovered material**
- **Energy recovered**
- **Compounding, joining, forming methods**
- **Emissions (dust, gasses, etc.)**

What is in your recyclate?

Composite Recycling –Economic Considerations

Transportation

Sorting

Manufacturing

Product value

Recyclate source drives cost

Composite Recycling – Market Considerations

- Market size
- Market maturity
- Product replaced
- Qualifications required
- **Alternative material availability**
- **Sensitivity to property variation**
- **Sensitivity to volume variation**

Market need must match supply capability

Option 1: Single Stream

Stable volume
& composition

OR

Flexible volume
& composition

Option 2: Supply Chain Consolidation

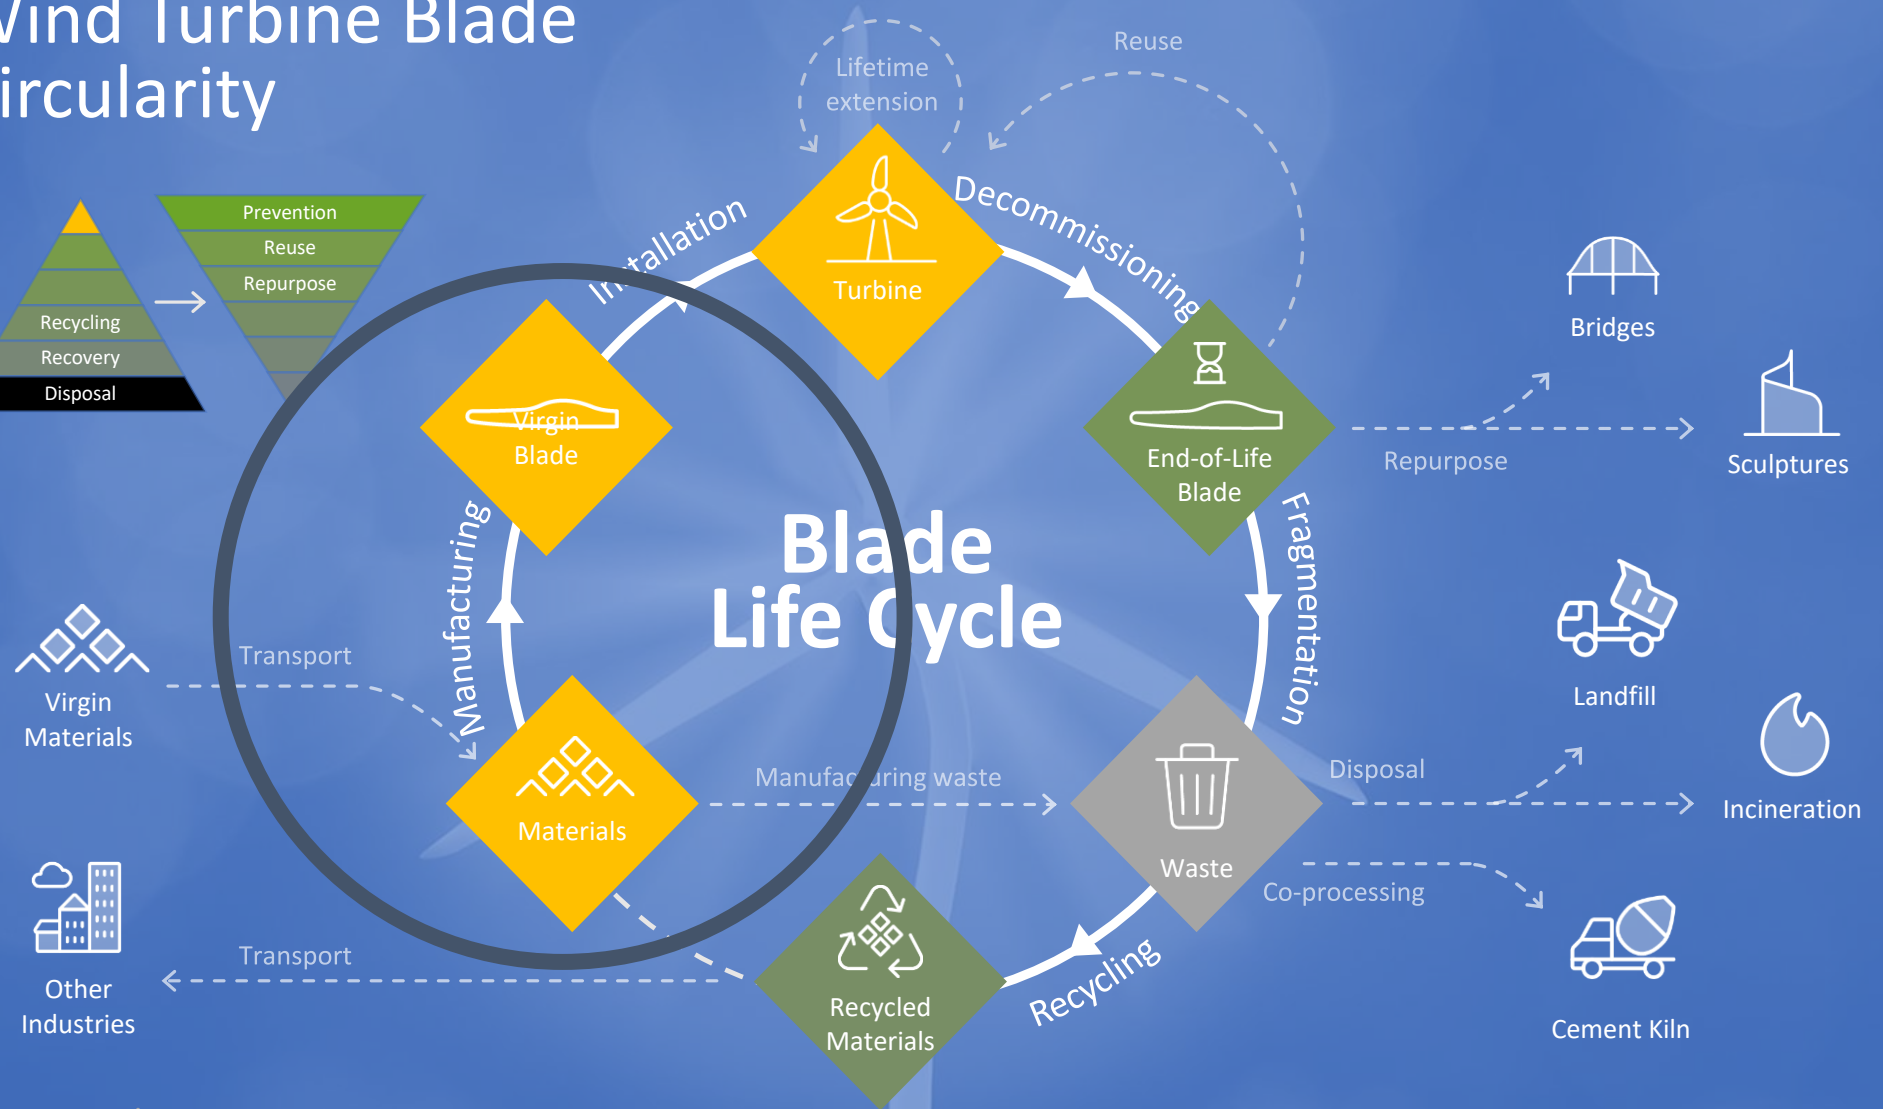

- Known composition
- Reliable volume
- Efficient distribution

Go back to the beginning
