Pultrusion Conference

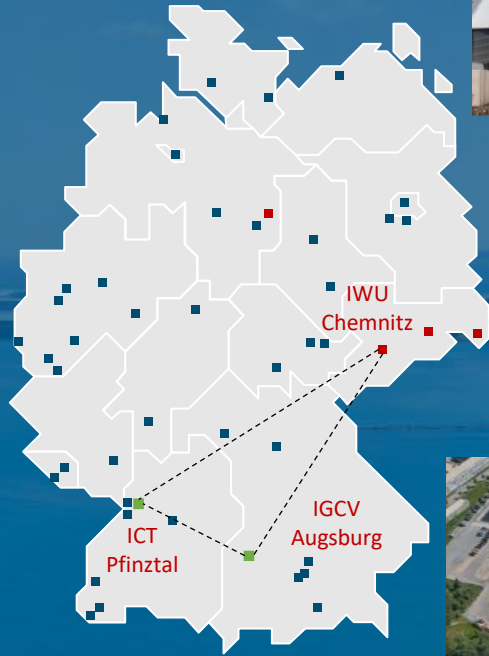

# From Small Colorful Elements to the Final Profile: A Simulation of the Pultrusion Process

Dipl.-Ing. David Löpitz

Fraunhofer Institute for Machine Tools and Forming Technology IWU

# Fraunhofer IWU

... about the implementation ...

From the idea ...

... to the finished product.

# Simulation in a 70 years old process - Why?

## Advantages of simulation

- Reduction of development times (from the idea to the finished profile)
- Reduction of time-consuming trials (end with the “Trial End Error”-method)
- Increase of the economic efficiency (optimized process parameters)

## Challenge of simulation

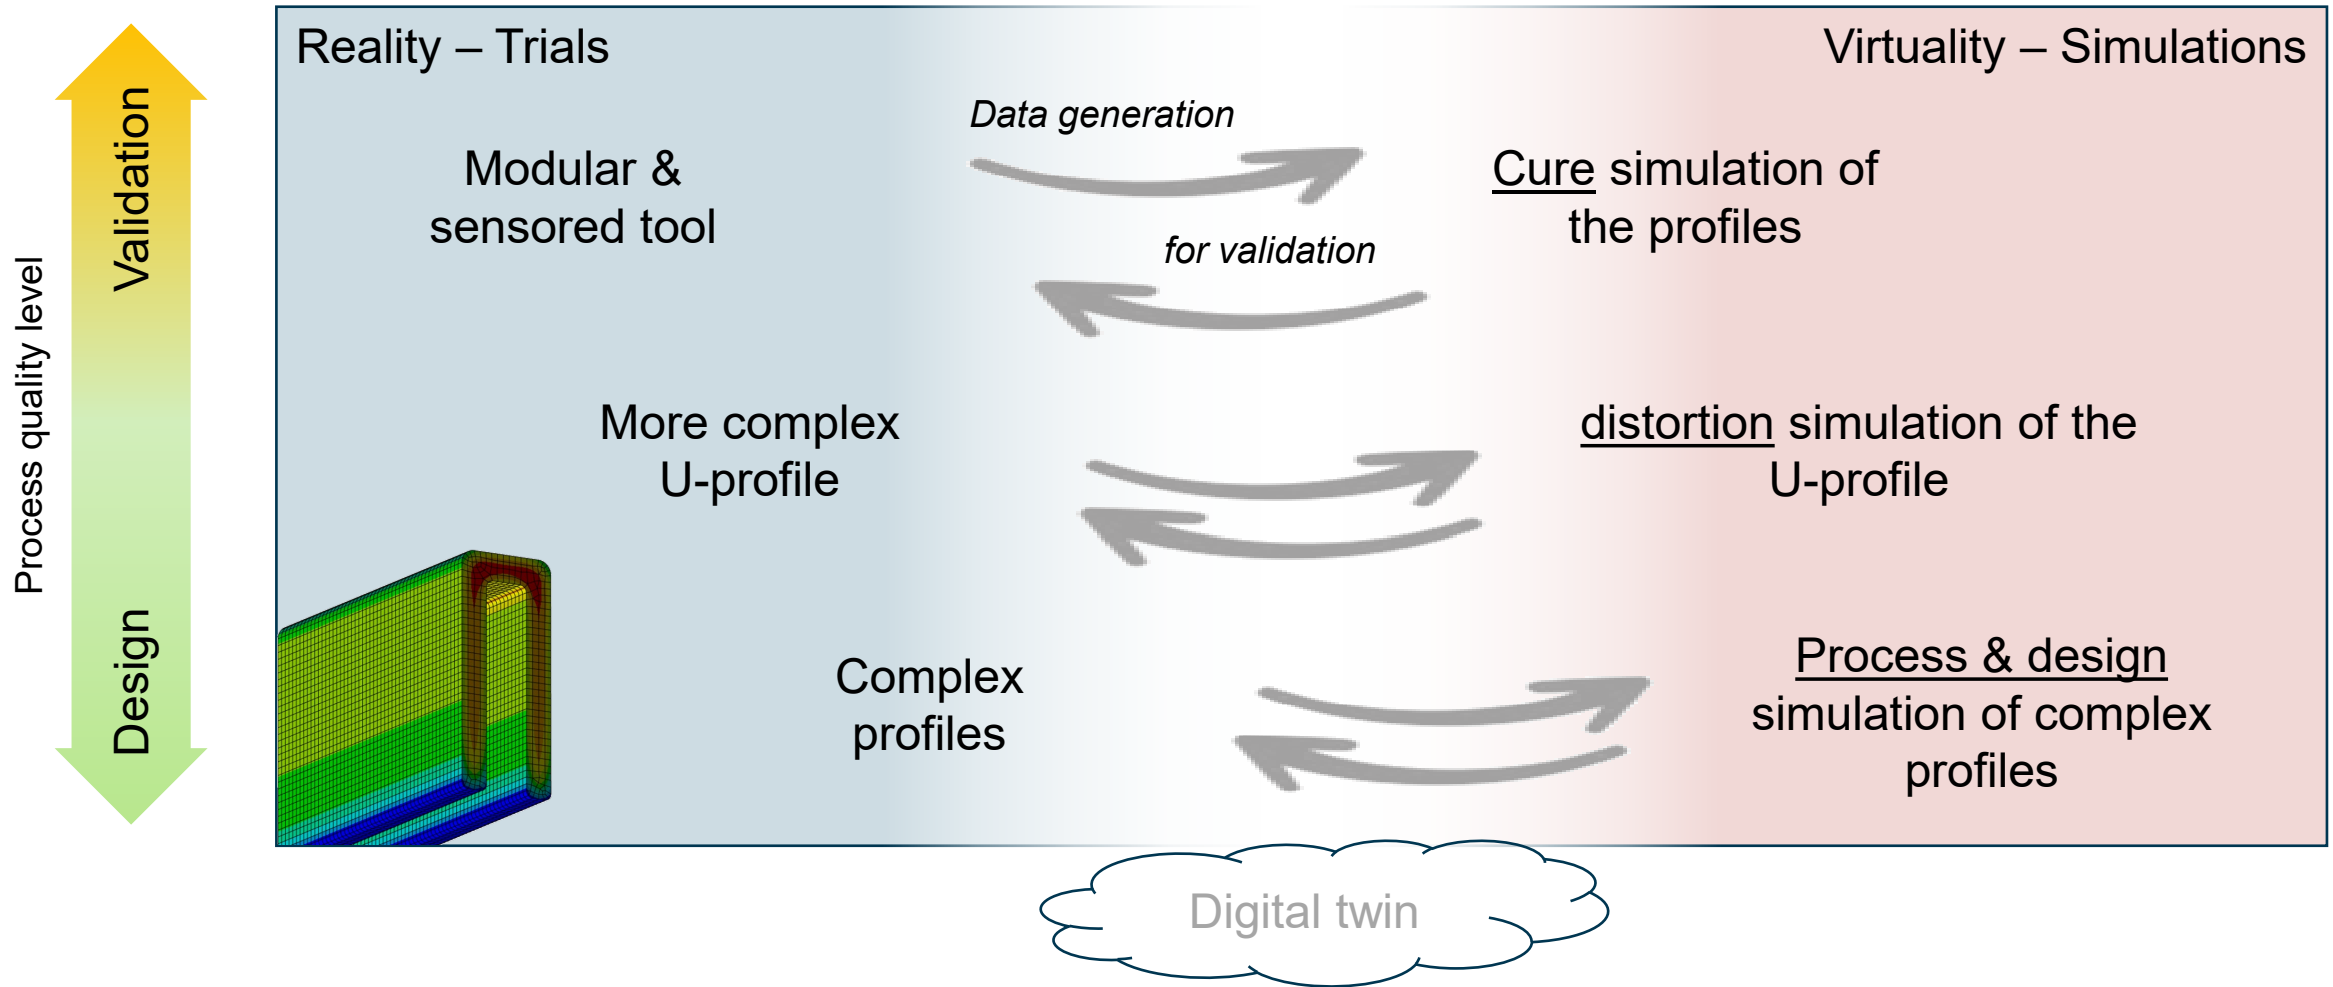

- Building up know-how
- Qualification of new or customized fiber/matrix systems

# Variation of the pultrusion parameters

# “The journey is the reward”

# Sensored tool setup

# Integrated measuring systems

## At the pultrusion line

- Temperature
- Pull-off force
- Pull-off speed

## Inside the tool system

- Temperature
- Pressure
- Ion viscosity

## Inside the profile

- Temperature
- Ion viscosity

# Selected trial results

- Pressure curves
- DEA curves
- Temperature curves (Validation)

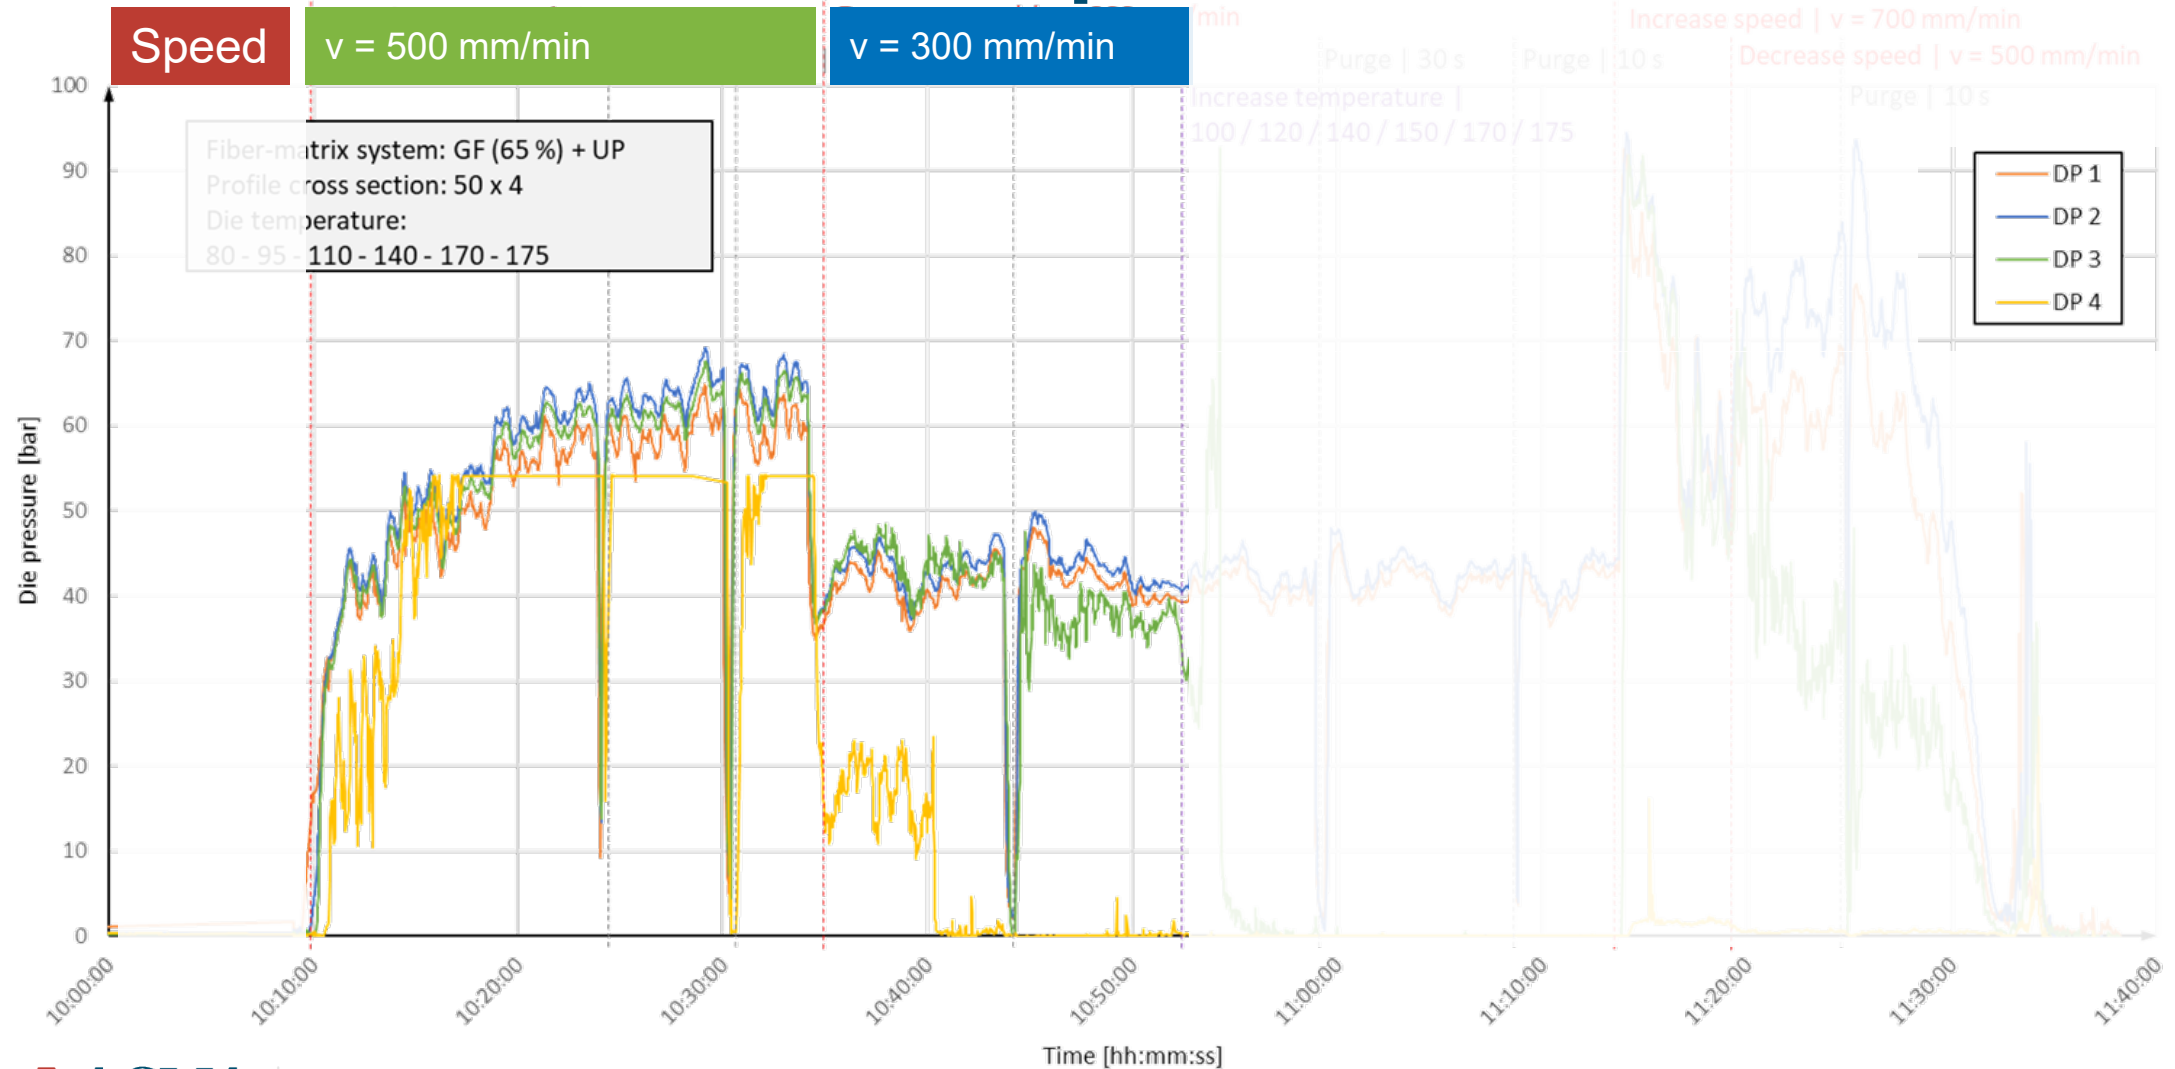

# Selected trial results – pressure

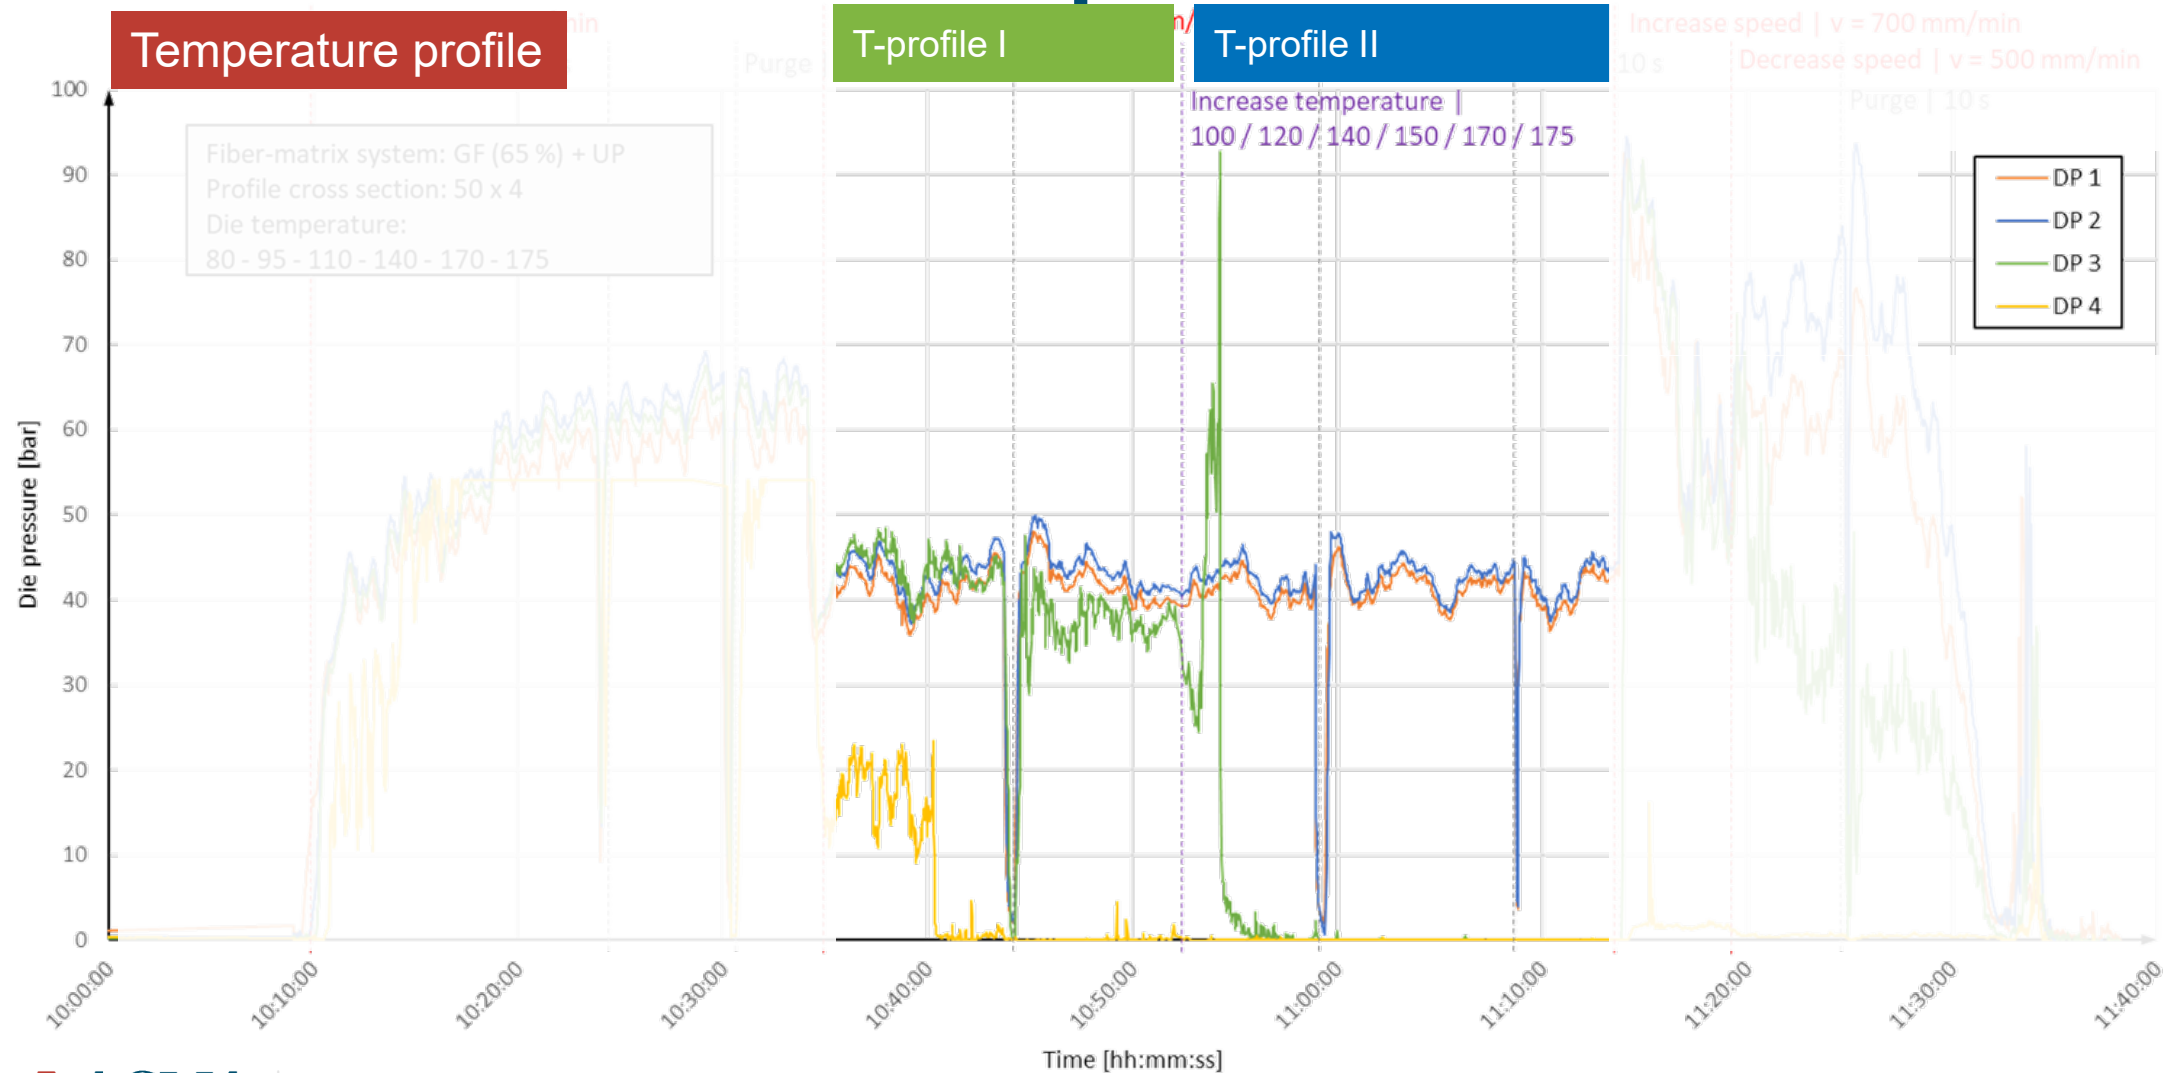

A

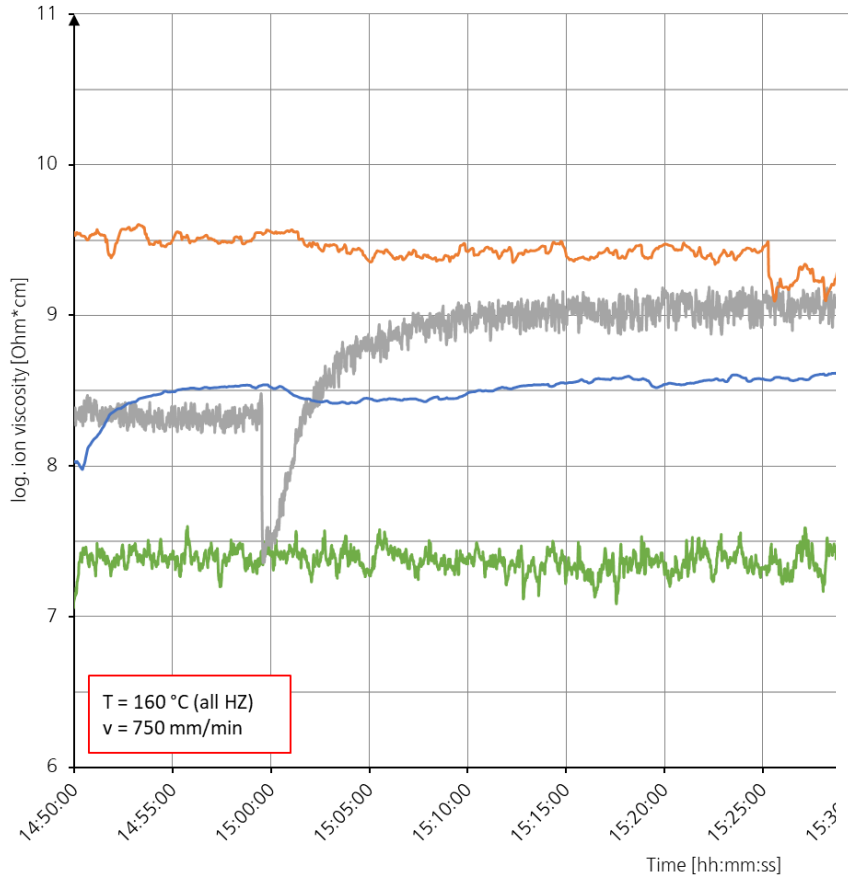

# Selected trial results – pressure

# Selected trial results – pressure

# Selected trial results – DEA

## Curing process

Die temperature: const. 120 °C  
 Pull-off speed: 750 mm/min

Fiber-matrix system: GF (65 %) + UP  
 Profile cross section: 50 x 4  
 Die temperature:  
 120 - 120 - 120 - 120 - 120 - 120

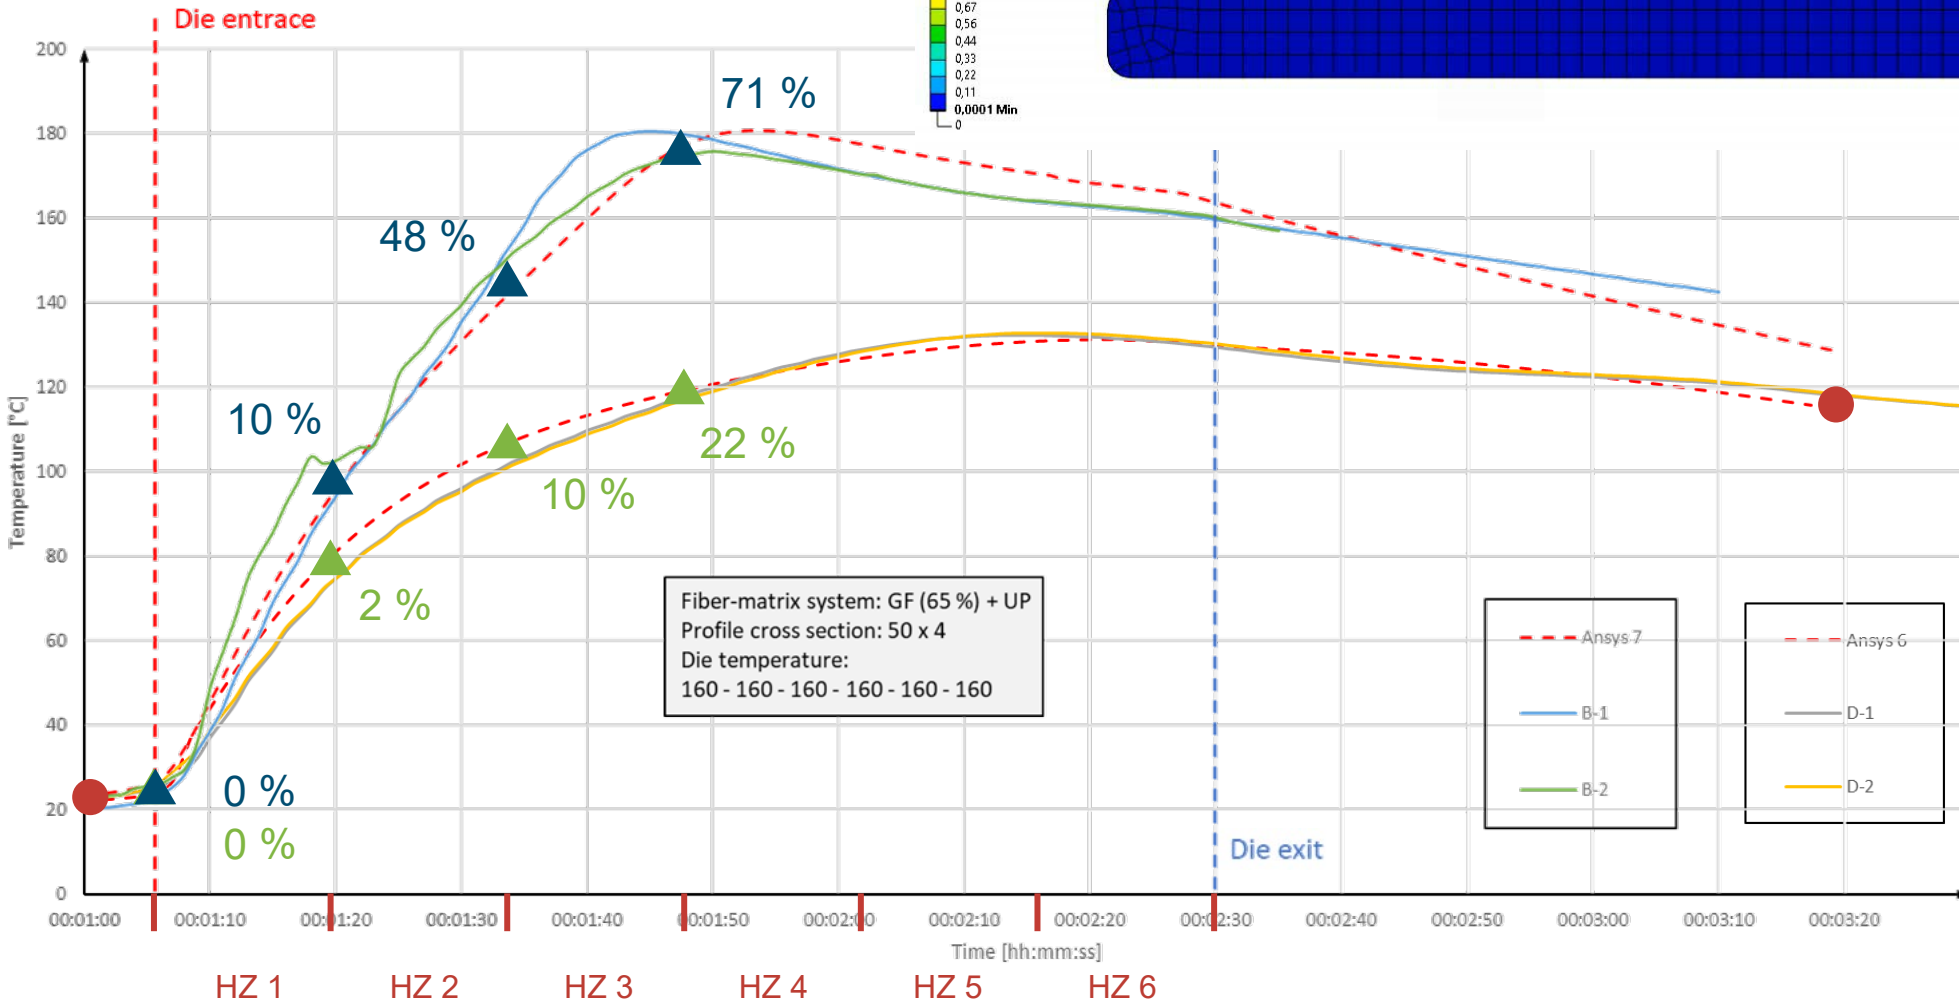

# Simulation model

C: 160 konst

Curing process

Die temperature: const. 160 °C  
 Pull-off speed: 750 mm/min

A

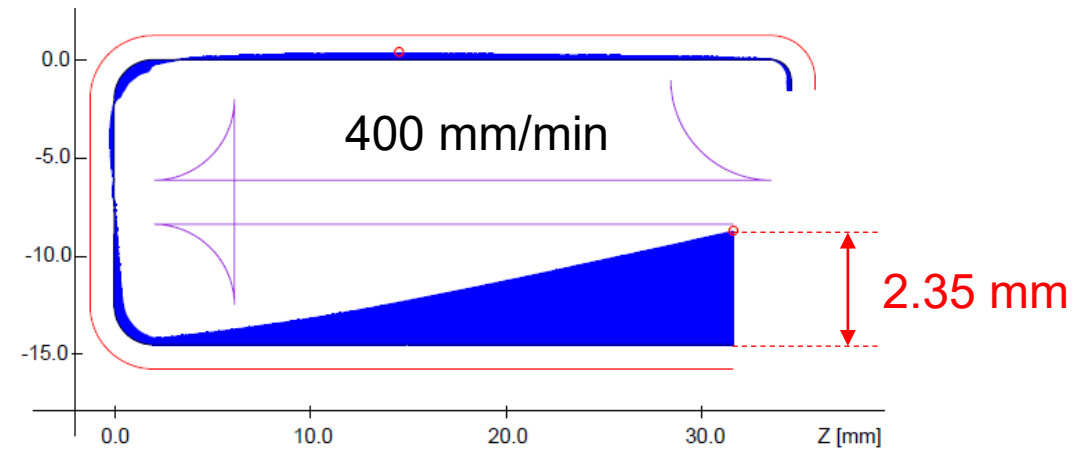

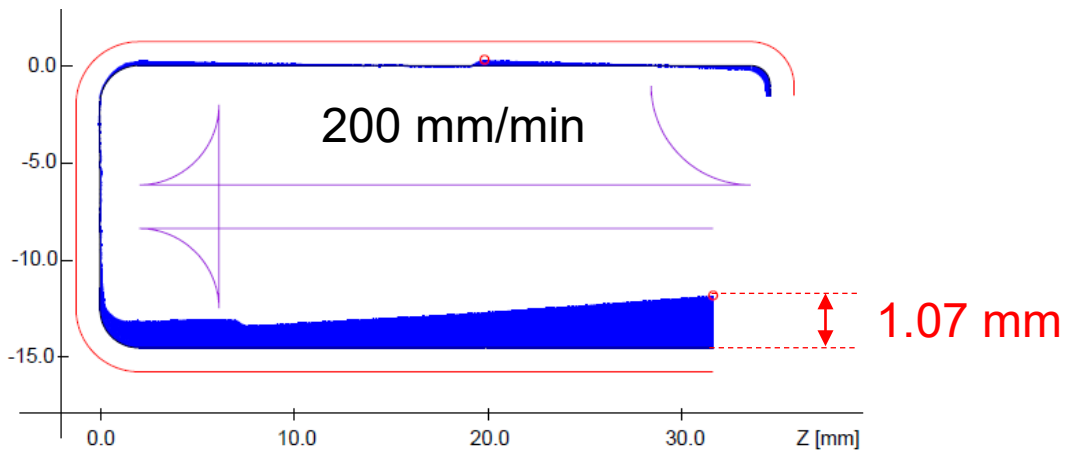

# Validation profile

- Trials with a U-shape

# Validation profile

B

# Simulation

Curing

Distortion

# Outlook and application

- Hybrid profiles – inline combination of metal sheets and FRP

Die entrance  
(near 0 % cure)

Die exit  
(3 – 91 % cure)

3 m after die exit  
(83 – 96 % cure)

# Outlook and application

- Complex 3 chamber hollow profile

# Summary

- ✓ Sensored die with different cross-sections
  - ➔ Data generation for validation (material & process)
  - ➔ Deeper process understanding
- ✓ Curing simulation (validated)
- ✓ Distortion simulation (validated)

Tool for process design

- Die design
- Optimization of process parameters
- Deeper process understanding for faster adjustments

# Thank You
