

ARCHITECTURAL DIVISION

The mission of the Architectural Division (Arch Div) is to educate and promote the use, understanding, and specification of architectural composites products for interior and exterior architectural construction applications. Division members work together to develop codes, standards, and specification for composites, and educate architects, specifiers, and end-users on architectural composites advancements.

Activities and Achievements:

- **Developed** educational content on global architectural composites applications for the ACMA Construction / Infrastructure Composites Technology Day in 2021 and 2023.
- **Educated** conference attendees at CAMX 2022 on the advancements of composites used in global architectural applications.
- **Developed** and presented educational presentations certified with AIA-Learning Units (LU) and LU/HSW credits to educate architecture professionals.
- **Conducted** the *Composites in Architecture Workshop* held in conjunction with CAMX 2019 to educate architects on the advantages of composites in architectural applications.
- **Published** [Industry Guidelines and Recommended Practices for Fiberglass Reinforced Polymer Architectural Products](#).
- **Organized** the “Composites Pavilion” at the annual American Institute of Architects (AIA) conference (2014 – 2018) to promote awareness and use of composite architectural components in building applications through exhibits, displays, and programming.
- **Conducted** *Composites in Architecture Design Challenge* (2016 – 2018) to engage university architecture programs by educating students and challenging them to design and explore with composites that introduced new designs, concepts, and manufacturing that could change the world of architectural composites.
- **Developed** a Construction Specifications Institute (CSI) guide specification for architectural products - *Section 068000 – Composite Fabrications* supporting International Building Code.
- **Introduced** approved code language for composites in the 2009 and 2012 International Building Code (Section 2613) on composites for interior and exterior building cladding applications.

Current and Future Projects:

- **Education:** Develop a portfolio of AIA certified continuing education presentations on a broad range of topics to provide architects and structural engineers with essential insights into design, specification, and sustainability of architectural composites that showcases industry best practice. Develop a compilation of global case studies that introduce architects and structural engineers to state-of-the-practice composites applications.
- **Outreach:** Engage and collaborate with the architectural and engineering community to conduct workshops, lunch and learn presentations, and other education on building codes, specifications, and field installations pertaining to composites materials and architectural composites products and applications.
